

enerjet2.0

Scar Remodeling Innovation

Technical Specifications

Parameter	Value
Power Inlet	100-240VAC, 50/60Hz, 350W
Mode of Operation	Pneumatic jet
Weight	Less than 30Kg
System Applicator	1 kg
Dimensions (HxWxD)	1.15m x 40cm x 40cm
Jet Diameter	0.02 mm
Shots Rate	Up to 28 shots per minute

ONE DEVICE, MULTIPLE SOLUTIONS!

Deep & Severe Acne Scars

Before and 1 month after the 3 sessions

Neck Lines

Before and 1 week after the 2 sessions

Courtesy of Dr. Arad, Israel

White Stretch Marks

Before and 8 months after 1 session

Courtesy of Prof. Cassuto, Italy

Keloids

Before and 3 weeks after 4 sessions

Courtesy of Dr. Artzi, Israel

Décolleté Dermal Thickening

Before and 3 months after 2 sessions

Courtesy of Dr. Patel, UK

Upper Lip "Barcode" Wrinkles

Before and 10 days after 1 session

Courtesy of Dr. Arad, Israel

"EnerJet fills the therapeutic gap for the most challenging skin diseases. The minimal downtime, lack of pain and vast operation possibilities regardless of sun exposure, makes the EnerJet a treatment option highly appreciated by both patients and doctors."

Dr. Sabine Zenker, Dermatologist
Munich, Germany

"EnerJet's new application is the "walk-in and walk-out" facelift or as I call it the "knifeless facelift". It's suitable for those women who seek immediate improvement without any downtime."

Dr. Alex Levenberg, Plastic Surgeon
Tel Aviv, Israel

"EnerJet treatments provide very good solutions to many indications that I treat on a daily basis, such as acne scars, lifting and regeneration. Not only is the treatment easy to perform, fast and elegant, it is also relatively painless."

Dr. Ofir Artzi, M.D., Dermatologist
Tel Aviv, Israel

"It's the most effective treatment for stretch marks. It's also the first line of treatment for deep acne scars that would not show such an improvement with any other type of technology."

Prof. Daniel Cassuto, M.D., Plastic Surgeon,
Milan, Italy

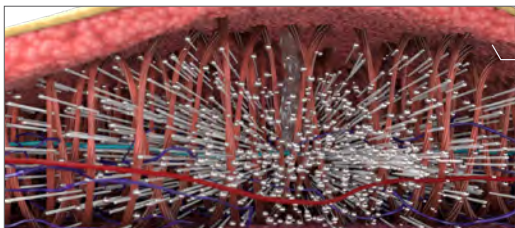

ENERJET 2.0

Innovative, advanced technological solution for superior physician and patient experiences and outstanding clinical results!

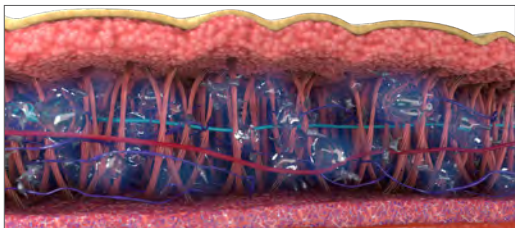

The EnerJet 2.0 is the only energy-based, platform device of its kind available on the market today offering unparalleled treatment solutions for all scar tissue remodeling, non-surgical facelift, as well as exceptional wrinkles reduction treatments

EnerJet2.0 Technology

EnerJet2.0 utilizes PerfAction's Patented advanced technology - Proprietary Jet technology for true tissue remodeling. This technology simultaneously delivers kinetic energy and a healing compound with minimal epidermal damage, enabling a controlled deep microtrauma profile effect for dermal remodeling.

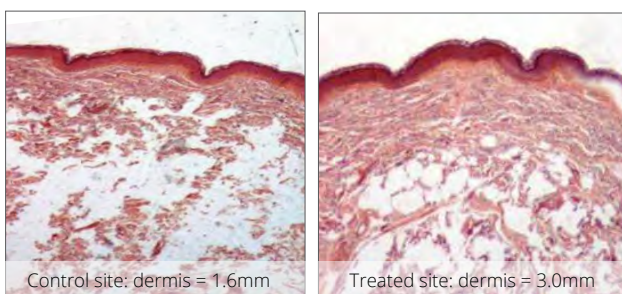

A powerful jet injection blasts compounds into the deeper layers of the skin, inducing a deep volumetric micro-trauma effect with an optimal spread of the material. The jet stream disperses the skin enhancing agent laterally, covering 100 times the area of one 32G needle entry point.

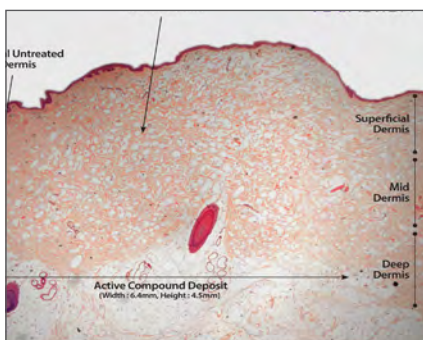

The synergy between energy and delivery leading to microtrauma and optimal dispersion of compound, resulting in a natural healing and hydrating process that generates production of new collagen, ultimately generating skin thickening and tightening.

CLINICALLY VALIDATED OUTCOMES

Sabine Zenker MD, Biaction Technology, a novel HA-delivery system for skin remodeling; a clinical update, 2011.

"Material deposit within the dermis. The epidermis remains intact."
Dr. Emmanuel Loeb, Pathologist

Walk-in/Walk-out Kinetic Facelift
